Assignment #4 – Loops

You will write a program that will get (input) two integers from the user: a starting number and an ending number. You will count from the starting number to the ending number (inclusive) and total the numbers counted if they are not evenly divisible by 3, 4 or 5. You will print the starting and ending number and the total after the counting has concluded.

*** Sample Output ***

Enter Starting Number:1
Enter Ending Number:1000
Starting Number: 1
Ending Number: 1000
Total: 200004
